EuroPHit

[Improving the energy performance of step-by-step refurbishment and integration of renewable energies]

Contract N°: SI2.645928

Co-funded by the Intelligent Energy Europe
Programme of the European Union

Technical References

Project Acronym	EuroPHit
Project Title	Improving the energy performance of step-by-step refurbishment and integration of renewable energies
Project Coordinator	Jan Steiger Passive House Institute, Dr. Wolfgang Feist Rheinstrasse 44/46 D 64283 Darmstadt jan.steiger@passiv.de
Project Duration	1 April 2013 – 31 March 2016 (36 Months)

Deliverable No.	D3.4
Dissemination Level	PU
Work Package	WP3_Practical Implementation
Lead beneficiary	04_MosArt
Contributing beneficiary(ies)	07_PEP
Author(s)	Nuria Díaz Antón Anne Vogt
Co-author(s)	Full Name(s) Full Name(s)

Abstract

This document provides a short overview of the efficiency improvement of a step-by-step refurbishment to EnerPHit standard to be undertaken for the project House Centón, in Santander, Spain.

First, the result sheet of the project's current status will present the calculated energy consumption of the existing building.

The PHPP result sheet of the completed EnerPHit retrofit will present the energy demand estimated for the completion of the project according to the overall refurbishment plan

Año construcción:		Temperatura interior invierno:	20,0 °C	
Nr. de viviendas:	1	Temperatura interior verano:	25,0 °C	
Nr. de personas:	2,2	Cargas internas de calor invierno:	2,1 W/m ²	
Cap. específica:	132 Wh/K por m ² SRE	idem verano:	2,1 W/m ²	
		Volumen exterior V _e m ³ :	270,6	
		Refrigeración mecánica:		
Valores característicos del edificio con relación a la superficie de referencia energética y año				
	Superficie de referencia energética	75,8 m ²		
Calefacción	Demanda de calefacción	342 kWh/(m ² a)	15 kWh/(m ² a)	no
	Carga de calefacción	108 W/m ²	10 W/m ²	no
Refrigeración	Demanda total refrigeración	kWh/(m ² a)	-	-
	Carga de refrigeración	W/m ²	-	-
	Frecuencia de sobrecalentamiento (> 25 °C)	0,0 %	-	-
Energía primaria	Calef., ref., deshum., ACS, elect. auxiliar, ilum., aparatos eléct.	567 kWh/(m ² a)	120 kWh/(m ² a)	no
	ACS, calefacción y electricidad auxiliar	527 kWh/(m ² a)	-	-
	Ahorro de EP a través de electricidad solar	kWh/(m ² a)	-	-
Hermeticidad	Resultado ensayo de presión n ₅₀	15,0 1/h	0,6 1/h	no
EnerPHit (rehabilitación): valores característicos de los elementos constructivos				
Envolvente térmica	Aislamiento hacia el aire exterior	2,34 W/(m ² K)	-	-
Valor-U medio	Aislamiento contra el terreno	1,05 W/(m ² K)	-	-
	Aislamiento interior hacia aire exterior	W/(m ² K)	-	-
	Aislamiento interior contra el terreno	W/(m ² K)	-	-
	Puentes térmicos ΔU	0,00 W/(m ² K)	-	-
	Ventanas	4,66 W/(m ² K)	-	-
	Puertas exteriores	1,20 W/(m ² K)	-	-
Sist. de ventilación	Eficiencia recuperación de calor	0 %	-	-

2 Retrofit steps

2.1 Overall refurbishment Plan

2.1.1 Retrofit steps:

The house is empty since the death of the old couple who used to live there. The relatives who inherited the property have the intention of doing a refurbishment to prepare it for their necessities in the present and in the future: first as a work place and later as a family home.

The budget is very low and all the construction works will be done by the owner, who is one of the first Passive House Trasdeshperson in Spain.

The main question is how to achieve the air quality requirements between the first and the second step.

Step. No.	Year	Measures	Specific Heating Demand	Heating Load	Cooling Demand	Cooling Load	Frequency of overheating	Additional Specific PV Gains
0	1950	Existing building	342	108	-	-	0%	
1	2014	Walls, roof and floor slab insulation. Windows Ventilation intermediate step Airtightness intermediate step						
2	2015	Airtightness final step Ventilation system with heat recovery (MVHR)	24	11	-	-	-	
3	2020	House Building services PV
