

Retrofitting for the energy revolution, one step at a time...

A focus on quality

If you're going to renovate, you've got an important question to face: am I doing the best job possible for the long-haul, or will I need to retrofit my retrofit in 10 to 15 years' time?

A focus on efficiency

By investing in energy efficiency each step of the way, you maximise the returns, on your retrofitting investments, both in terms of comfort and money.

EuroPHit

With the EnerPHit Standard for retrofits as the goal and Passive House principles as the basis, EuroPHit applies knowledge on deep energy retrofits to refurbishments done step-by-step, laying the groundwork with guidelines, training materials, design tools, financing models and certification schemes.
