We Have Been Warned!

EuroPHit

Diana Ürge-Vorsatz

Lead Author, IPCC, Central European University

- ***Shallow retrofits need to be avoided***
- ***“Wait out” for deep, systemic retrofit***
- ***Need to revisit support schemes around shallow retrofits!***

Way too thin!

Co-funded by the Intelligent Energy Europe Programme of the European Union

www.europhit.eu

Typical Retrofitter Questions:

EuroPHit

- **How far** should I go?
- What should I do **first**?
- Does it make **financial** sense?
- Where can I get expert **know-how**?
- Is there step by step **guidance**?
- Latest innovative **products**?

EuroPHit aims to provide the answers!

Case Study Overview

EuroPHit

Total floor area = 25,000 m²

Committed budget = €18.5 m

Residential

- 3 single family homes
- 4 multi-unit social housing

Non-Domestic

- 3 schools
- 1 hotel & restaurant
- 2 therapy and rehab

Co-funded by the Intelligent Energy Europe
Programme of the European Union

Heating Demand & Heat Load Reduction EuroPHit

EnerPHit verification

Building: Hotel Restaurant Valcanover
 Street:
 Postcode/City:
 Country: Italy
 Building type: Masonry construction
 Climate: Pergine
 Altitude of building site (in [m] above sea level): 459

Year of Construction: 1928
 Number of dwelling units: 1
 Number of Occupants: 37.0
 Exterior vol. V_e: 2946.8 m³

Interior temperature winter [C°]: 20.0
 Internal heat gains winter [W/m²]: 9.4
 Interior temp. summer [C°]: 25.0
 IHC summer [W/m²]: 5.9
 Spec. capacity [W/mK per m² TFA]: 204
 Mechanical cooling: X

Specific building demands with reference to the treated floor area	Requirements	Fulfilled?
Space heating Annual heating demand	25 kWh/(m²a)	no
Heating load	-	-
Space cooling Overall specific space cooling demand	-	-
Cooling load	-	-
Frequency of overheating (> 25 °C)	-	-
Primary Energy Heating, cooling, desalting, DHW, space heating and auxiliary electricity	425 kWh/(m²a)	no
Specific primary energy reduction through solar electricity	-	-
Airtightness Pressurization test result n ₅₀	1.1/h	no

I confirm that the values given herein have been determined following the PHPP methodology and were determined based on the characteristics of the building. The PHPP calculations are attached to this application.

EnerPHit building retrofit (acc. to heating demand)? no

2. Determine Economic Feasibility

EuroPHit

Option A:
**Cost to Save 1 kWh
of Energy**

Option B:
**Cost to Buy 1 kWh
of Energy**

**If $A < B$, A is a 'No Brainer'
Typically people still chose B ('No-Brain')**

Co-funded by the Intelligent Energy Europe
Programme of the European Union

www.europhit.eu

Calculating Cost to Save 1 kWh of Energy EuroPHit

Calculation Factors:

- Retrofit cost for individual measures
- Annual maintenance cost
- Subsidies and supports (if any)
- Product life
- Energy saved
- Interest rate, inflation rate
- Duration of borrowing
- Energy Price

Calculation of selected configuration

	Lower Efficiency		Higher Efficiency		Difference / Savings / Profit	
	Existing	2-2: 1 + n50 1h1 + MVHR 80%	Existing	2-2: 1 + n50 1h1 + MVHR 80%		
Design according to variant	1-Existing	2-2: 1 + n50 1h1 + MVHR 80%				
Annual heating demand	91.617	63.757				kWh(m²/a)
Minimal interior surface temperature						°C
Investment						
	Per m² of TFA	Entire building	Per m² of TFA	Entire building	Per m² of TFA	Entire building
Treated Floor Area (TFA)	1.00	1203	1.00	1203	1.00	1203
Investment costs less sum of financial support	0.00	0	199.49	240000	199.49	240000
Annuity (capital costs)	0.00	0	12.75	15342	12.75	15342
Energy (Space heating + cooling + mech. ventilation)						
	Per m² of TFA	Entire building	Per m² of TFA	Entire building	Per m² of TFA	Entire building
Area	1	1203	1	1203	1	1203
Annual heating demand	91.62	110223	63.76	76705	27.86	33518
Cooling + dehumidification demand						
Final energy demand	209.56	252112	139.36	167660	70.20	84452
CO ₂ -Emissions	71.25	85718	47.38	57005	23.87	28714
Primary energy demand	272.42	327746	181.17	217958	91.25	109788
Total cost space conditioning	26.19	31514	18.25	21958	7.94	9557
Economic viability						
Total annual costs	26.19	31514	31.00	37299	-4.81	-5785
					111.26	133856
					18.2	
Approximate estimate of cost effectiveness (all components with time!)						
Boundary conditions		Energy price [cent/kWh]		Period of use		
Nominal interest rate	4.00%	Electricity	25	Build. assemblies	50	a
Inflation	1.50%	Gas/Oil		Vent. system	25	a
Period under consideration [a]	20	Logs	5	Thermal bridges	50	a
		Pellet	7	Complete building	20	a
		District heating	13	Windows	30	a
		Others	20			

Revolutionary and Highly practical tool:
Enables real-time comparison of cost efficiency

Replacing windows only?

EuroPHit

Then put them in the right place!

(awaiting future external insulation)

Co-funded by the Intelligent Energy Europe
Programme of the European Union

www.europhit.eu

Keeping occupants in situ?

EuroPHit

France:

- Start with issues that improve comfort (windows)
- Use existing ducts for MVHR
- Scaffolding avoided in 1st phase

UK:

- 20% of building unoccupied
- Phased approach preferred by residents
- Temp. partitioning of living rooms

Bulgaria:

- Tried to schedule works in school holidays
- 1st step involves external roof refurb
- Health and safety a high concern

Tender Clauses Specific to Passive House EuroPHit

- Define Passive House certification criteria
- **Attendance at project briefing and training**
- **Adherence to PHPP models**
- Performance specification for materials and products
- ISO Standards for glass, frames, spacer bars and SHGC
- Certification of MVHR?
- MVHR efficiency, filter types, power consumption, duct testing
- MVHR commissioning and air flow balancing
- Blower door test protocols
- Allowance for thermal imaging
- Signed declaration by construction supervisor
